Betascript Publishers Dez 2009, 2009. Taschenbuch. Book Condition: Neu. 220x150x6 mm. Neuware - High Quality Content by WIKIPEDIA articles! A table is a set of data elements (values) that is organized using a model of vertical columns (which are identified by their name) and horizontal rows. A table has a specified number of columns, but can have any number of rows. Each row is identified by the values appearing in a particular column subset which has been identified as a candidate key. The tables contain the prime factorization of the natural numbers from 1 to 1000. When  $n$  is a prime number, the prime factorization is just  $n$  itself, written in bold below. The number 1 is called a unit. It has no prime factors and is neither prime nor composite. A divisor of an integer  $n$ , also called a factor of  $n$ , is an integer which evenly divides  $n$  without leaving a remainder. 108 pp. Englisch.
